40th Harvest (96, \$65) and the La Serena Brunello di Montalcino (96, \$50) deliver the elegance and vibrant character of the northern part of the region. From the southern sector, the San Felice Brunello di Montalcino Campogiovanni (96, \$60) and Collematroni Brunello di Montalcino (96, \$65) offer more tannic structure, though the latter also has an elevant side.

"It was a fantastic summer season, very hot but very dry," notes Elisabetta Gmaid, Angulini, who owns both Altesino and Caparzo. "There was] very little production, but it was very special. The grapes were so bealthy, especially in the north part of Montalcino, with incredible phenolic maturation and concentration of color and transits."

These are just a few of the highlights among the nearly 100 wines I tasted from the 2012 harvest. Also in the classic range are Altesino's Brunello di Montalcino Montosoli (95, 5125), Casanova di Nert Brunello di Montalcino (95, \$65), Le Ragnaie Brunello di Montalcino Ragnaie VIV. (95, \$125) and a dos from San Filippo: its regular Brunello di Montalcino Ragnaie VIV. (95, \$125) and a dos from San Filippo: its regular Brunello di Montalcino (95, \$70) and the single-vineyard Le Lucére (95, \$80).

Overall, more than 90 percent of the 2012. It tasted rated outstanding on higher. (A fire alphabetical list of scores and prices for a wines in this report is available at www.win spectatot.com/05/017.) The wines combin the freshness of the 2010s with the density an power of the 200s, yet with an extra element of ripe Sangiovese fruit. I rate the vintage: 96 points.

"The wines adapted to the little amount of water so that there was less vegetation and the clusters were smaller. 2012 is a vintage where the final result is extraordinary," reports San Filippo owner Roberto Gianelli.

'11 was a warm vintage, but the heat came in a three-week period in August, when temperatures peaked at 105° E. This caused the vines to shut down, making optimum ripeness difficult to achieve. Unlike the 2010s, the 2011 riservas have not benefited from the

extra year of aging. Most seem to be developing quickly, and offer softer structures than cither 2012 or 2010. Some wines are approachable now, while others should reach a good peak in the next two to three years.

In muello di Montalcino is made from 100 percent Sangiovese, specifically the Sangiovese Grosso subspecies. The area is a mix of vineyants, forests and grain production zones, ranging in elevation from 500 to almost 2,000 feet for the cultivation of Sangiovese for Brunello di Montalcino. Montalcino's complex mix of clay and limestone soils and a Mediterraneam climate tempered by

drea Mantengoli, delivered a classic-rated Brunello from the exceptional 2012 harvest

The southern portion of the zone is more susceptible to winds from the sea and is lower in elevation and warmer. Thus it is often harvested two to three weeks earlier than the northern vineyasts. Giacono Neri, proprietor of Casanova di Neri, has vineyands in both areas. He began picking at his more southerly Frentan Nouva on Sept. 18 but didn't harvest his Certeatlov vineyard in the northern excessed of the multi-time word (2010).

The extreme weather began in the winter, January 2012 whered in warm temperatures, but the mercury plunged at the beginning of February, accompanied by plenty of snow. Colder-than-average weather extended into March, where a risk of frost at the end of the mouth was purposely avoided.

Spring advanced in a regular fashion. Then the heat turned up over the summer months, exacerbated by the lack of rain from May
